CONDITIONER

PLANT GROWTH  
& NUTRIENTS

ABIOTIC STRESS

Maximise the growth and yield of your crops with **AgriFert<sup>®</sup>SeaBorN<sup>™</sup>**, a specially formulated liquid fertiliser.

Activated with three types of seaweed-based biostimulants and enhanced with boron for improved plant cell development and nitrogen for increased plant growth, **AgriFert<sup>®</sup>SeaBorN<sup>™</sup>** is the perfect solution for achieving optimal results for your pasture or crops.

**AgriFert<sup>®</sup>SeaBorN<sup>™</sup>** is rich in micronutrients, hormones, and amino acids plus a range of plant growth-promoting substances.

### Primary sectors:

- Agriculture
- Horticulture
- Turf

### FEATURES:

- Use as a foliar spray, soil drench or fertigation application
- Complex micronutrients and compounds
- Boosted with N and Boron
- Enhances plant and soil health
- Adds resistance to stress and disease
- Blended ready to use

## Fertiliser from the sea boosted with Nitrogen and Boron to enhance growth

Seaweed is a natural fertiliser that helps to improve soil health, increase plant growth and yield, and boost plant resistance to diseases and pests. Nutrients include:

- 1. Nitrogen:** Seaweed contains high levels of nitrogen, which is essential for plant growth and the development of healthy leaves and stems.
- 2. Potassium:** Potassium is an important nutrient found in seaweed, and it plays a role in helping plants absorb and use water and nutrients more efficiently.
- 3. Phosphorus:** Phosphorus is essential for root growth, flower production, and the development of seeds and fruit.
- 4. Trace minerals:** Seaweed also contains trace minerals such as iron, zinc, and manganese, which are necessary for plant health.
- 5. Plant hormones:** Seaweed contains plant hormones such as auxins and cytokinins, which can help stimulate plant growth and development.

**AgriFert®SeaBorN™** is boosted with N and Boron. Boron is an essential micronutrient for plant growth and development. It plays a number of important roles in plant biology, including;

- 1. Cell wall development:** Boron is involved in the synthesis of cell wall polysaccharides, which are essential for maintaining the structural integrity of plant cells.
- 2. Pollen germination and fertilisation:** Boron is required for the proper development and function of the male reproductive organs in plants, including the anthers and pollen grains.
- 3. Sugar transport:** Boron plays a role in the transport of sugars within plants, which is important for plant growth and development.
- 4. Hormone regulation:** Boron is involved in the synthesis and metabolism of plant hormones such as auxin, which is important for plant growth and development.
- 5. Stress tolerance:** Boron has been shown to improve the stress tolerance of plants, including tolerance to drought, cold, and high salinity.

## USAGE

For foliar application it is best to spray early in the morning or later in the day to avoid hot and direct sunlight. Best applied to crops and pasture with full leaf.

TYPICAL CROPS	RATE	DILUTION	APPLICATION NOTES
Agriculture	15-10L/Ha	1:10	Apply 1 - 3 times during the growing season
Horticulture	5-10L/Ha	1:50	Apply 2 - 4 times through Autumn and Spring

*Note: Increase the dilution rate if the product is used as a soil drench.*

## PRODUCT COMPOSITION

		UNITS
Appearance	Charcoal colour liquid	
Smell	Slightly Fish / Kelp like smell	
pH	7.5	
Solids	-	% w/v
Total Organic Matter	-	%
Specific Gravity	1.15	
Filtration	-	Microns

## ELEMENTAL PROPERTIES

ELEMENT	SYMBOL	AMOUNT	UNITS
Nitrogen	N	8	% w/v
Boron	B	520	mg/kg

Ascophyllum Seaweed

Laminaria Seaweed

Sargassum Seaweed

*Note: Seaweed contains an array of trace elements and amino acids.*
