

OPTISOLVE™ SHEEP HELPS WITH

- Providing trace minerals to your sheep through drinking water.

WHY USE OPTISOLVE™ SHEEP?

- Effective method of getting critical trace elements into your sheep.
- OptiSolve™ Sheep includes the top 4 trace elements plus Biotin required for sheep.

DIRECTIONS FOR USE

Dosage rate 1 grams per sheep per day. Dissolves in water. Suitable for dosing into stock drinking water through Dosatron, Se-Tech, Grundfos - dose pumps and in-shed drenching systems.

HEALTH AND SAFETY

Material safety data sheets are available on request.

WATER SOLUBLE TRACE ELEMENTS FOR OPTIMAL HEALTH & PERFORMANCE.

INGREDIENTS IN OPTISOLVE™ SHEEP

PER 1 GRAM DOSE

- 0.8mg selenium
- 0.8mg Iodine
- 1.5mg cobalt
- 100mg zinc
- 3mg Biotin

Selenium required for reproduction, and lambing (placental shedding), milk production and overall immunity. Several studies have shown it can help with disease resistance (e.g. Mastitis).

Cobalt is well known for the productions of Vitamin B12 and B1. They help with energy metabolism in the rumen of sheep. Cobalt also helps with fibre digestion and immune system.

Biotin is B-group vitamin and plays a key role in synthesis of glucose, protein and fat. Biotin is necessary for syntheses of keratin, a hard structural protein in hooves.

Iodine helps drive intake and increases the energy and metabolism of sheep. It plays a crucial role in milk production and reproduction.

Zinc is required for growth and plays a role in the reproductive system of sheep along with hoof strength and the immune system.

No added Copper due to sensitivity to storing toxin levels
