2. Hazard Identification

Approval

This product is an approved substance under the Hazardous Substances and New Organisms Act (HSNO, Approval HSR002544 or HSR2503, Construction Products (Subsidiary Hazard) Group Standard 2017) or Additives, Process Chemicals and Raw Materials (Subsidiary Hazard) Group Standard 2017, and is classified as follows:

<table>
<thead>
<tr>
<th>Classes</th>
<th>6.3A Causes skin irritation.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>6.4A Causes eye irritation.</td>
</tr>
</tbody>
</table>

SYMBOLS

WARNING

Other Classifications

Zeolite contains crystalline silica. The following classification ONLY applies to this substance if it is in the form of a fine respirable dust in an occupational (chronic exposure) setting:.

<table>
<thead>
<tr>
<th>Classes</th>
<th>6.7A May cause cancer</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>6.9A Causes damage to organs through prolonged or repeated exposure</td>
</tr>
</tbody>

Precautionary Statements

Precautionary

Read label before use.
Wash hands thoroughly after handling.
Wear protective gloves/protective clothing.
Wear eye/face protection.
IF ON SKIN: Wash with plenty of soap and water. If skin irritation occurs: get medical advice/attention.
Take off contaminated clothing and wash before re-use.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Apply continuous irrigation with water for at least 15 minutes holding eyelids apart. If eye irritation persists: Get medical advice.

3. Composition / Information on Ingredients

<table>

</tr>
</tbody>
</table>

This is a commercial product whose exact ratio of components may vary. Trace quantities of impurities are also likely.

4. First Aid

**General Information**

If medical advice is needed, have product container or label at hand. You should call the National Poisons Centre if you feel that you may have been poisoned, burned or irritated by this product. The number is 0800 764 766 (0800 POISON) (24 hr emergency service).

**Recommended first aid facilities**

Ready access to running water is required. Accessible eyewash is required.

**Exposure**

**Swallowed**

Do NOT induce vomiting. Give a glass of water to drink. Contact a doctor.

**Eye contact**

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Apply continuous irrigation with water for at least 15 minutes holding eyelids apart. If eye irritation persists: Get medical advice.

**Skin contact**

IF ON SKIN: Wash with plenty of soap and water. If skin irritation occurs: get medical advice/attention. Take off contaminated clothing and wash before re-use.

**Inhaled**

If coughing, dizziness or shortness of breath is experienced, remove the patient to fresh air immediately. If patient is unconscious, place in the recovery position (on the side) for transport and contact a doctor.

**Advice to Doctor**

Treat symptomatically

5. Firefighting Measures

**Fire and explosion hazards:**

There are no specific risks for fire/explosion for this chemical. It is non-flammable.

**Suitable extinguishing substances:**

Carbon dioxide, extinguishing powder or water jet. Fight larger fires with water jet or alcohol resistant foam.

**Unsuitable extinguishing substances:**

Unknown.

**Products of combustion:**

Product does not burn. Dust may form irritating atmosphere.

**Protective equipment:**

No special measures are required.

**Hazchem code:**

NA

6. Accidental Release Measures

**Containment**

There is no current legal requirement for containment of this product.

**Emergency procedures**

In the event of large spillage alert the fire brigade to location and give brief description of hazard.

Wear protective equipment to prevent skin, eye and respiratory exposure.

Clear area of any unprotected personnel.

Sweep up the solid. Avoid creating dust. If appropriate, use a gentle water spray to wet material to minimise dust generation.

**Disposal**

Sweep up and collect recoverable material into labelled containers for recycling or salvage. This material may be suitable for approved landfill. Dispose of only in accord with all regulations.

**Precautions**

Wear protective equipment to prevent skin and eye contamination and the inhalation of dusts. Work up wind or increase ventilation.
Zeolite - granular
Safety Data Sheet

7. Storage & Handling

Storage
Stable under normal use and storage conditions.

Handling
Keep exposure to a minimum, and minimise the quantities kept in work areas. See section 8 with regard to personal protective equipment requirements. Do not breathe dust.

8. Exposure Controls / Personal Protective Equipment

Workplace Exposure Standards
A workplace exposure standard (WES) has not been established by WorkSafe NZ for this product. There is a general limit of 3mg/m³ for respirable particulates and 10mg/m³ for inhalable particulates when limits have not otherwise been established.

<table>

* These workplace exposure standards are also Prescribed Exposure Standards (PES) under the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016.

Engineering Controls
In industrial situations, it is expected that employee exposure to hazardous substances will be controlled to a level as far below the WES as practicable by applying the hierarchy of control required by the Health and Safety at Work Act (2015) and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016. Exposure can be reduced by process modification, use of local exhaust ventilation, capturing substances at the source, or other methods. If you believe airborne concentrations of mists, dusts or vapours are high, you are advised to modify processes or increase ventilation.

Personal Protective Equipment

Eyes
Protective eyewear is not normally necessary when using this product. However, it always prudent to use protective eyewear if dust is likely.

Skin
Avoid repeated or prolonged skin contact. Wear overalls, rubber boots and impervious gloves. Replace frequently. Gloves should be checked for tears or holes before use. Remove protective clothing and wash exposed areas with soap and water prior to eating, drinking or smoking. Wash contaminated clothing before re-use.

Respiratory
To prevent irritation a well fitted dust mask should be used (this is not recommended when exposure is close to the WES). Use of a P2 dust mask or fine particulate half or full face respirator with an effective seal is recommended when airborne concentrations approach the WES (section 8). Fit testing and clear guidelines and training for use and maintenance of PPE are necessary.

WES Additional Information
Not applicable

December 2017

Product Name: Zeolite - granular
10. Stability & Reactivity

Stability

Stable

Conditions to be avoided

Containers should be kept closed in order to avoid contamination. Avoid the creation of dust.

Incompatible groups

Avoid contact with strong oxidising agents and hydrogen fluoride.

Hazardous decomposition products

None known

Hazardous reactions

Zeolites will react with hydrogen fluoride (HF) acid. Avoid contact with strong oxidising agents.

11. Toxicological Information

Summary

IF IN EYES: Fine dust may cause irritation when in direct contact.

IF ON SKIN: Material may cause drying out of skin.

IF INHALED: May cause respiratory irritation. Also see chronic effects.

IF SWALLOWED: No adverse effects anticipated under normal use conditions.

CHRONIC EFFECTS: The adverse health effects from respirable crystalline silica exposure—silicosis, cancer, scleroderma, tuberculosis, and nephrotoxicity—are chronic effects. This product is granular, but may become a respirable dust through sanding/grinding.

Supporting Data

Acute

Oral

Not considered acutely toxic if swallowed.

Dermal

Not considered acutely toxic by dermal contact.

Inhaled

The substance is not considered acutely toxic if inhaled, however there may be irritation of the respiratory tract if dust is inhaled. Short term (acute) silicosis (see “systemic” below) can also occur with one-off exposures to extremely high levels of fine crystalline silica dust. Other short term effects include irritation, choking and difficulty breathing.

Eye

The mixture is not considered to be an eye irritant. Dust may be an eye irritant (mechanical irritation).

Skin

The mixture is considered to be a mild skin irritant.

Chronic

Sensitisation

No ingredient present at concentrations > 0.1% is considered a sensitizer.

Mutagenicity

No ingredient present at concentrations > 0.1% is considered a mutagen.

Carcinogenicity

Zeolites have been classified by IARC as group 3—cannot be evaluated as to their carcinogenicity to humans. However, there is evidence that this material does contain quartz and cristobalite. Crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (IARC Group 1). Crystalline Silica triggers 6.7A classification (confirmed carcinogen). The carcinogenicity of silica is related to long term (e.g., 10 years) inhalation of very fine particulate (e.g., from sand blasting or dry cutting of quartz containing substrates). Carcinogenicity of silica appears linked to development of silicosis (see systematic below) followed by complications and, eventually lung cancer.

Reproductive / Developmental

No ingredient present at concentrations > 0.1% is considered a reproductive or developmental toxicant or have any effects on or via lactation.

Systemic

The respirable fraction of the dust of this product is considered to be a target organ toxicant, because of the presence of crystalline silica at greater than 1%. Crystalline silica triggers 6.9A classification if it is in the form of a fine respirable dust in an occupational (chronic exposure) setting. This is due to the development of silicosis which can occur following exposure to extremely high levels of fine silica dust. Silicosis is a type of pneumoconiosis—a disease of the lung that causes inflammation, scar tissue, lesions and fibrosis in the lung (alveolar). Symptoms include shortness of breath, cough, fever, loss of appetite and cyanosis (bluish skin). Silicosis can occur following prolonged exposure (e.g., 10 years) to relatively high levels of fine crystalline silica dust. Based on limited animal research, it is possible that repeated inhalation of cellulose fibre dust may lead to inflammation and scarring of the lung.

Aggravation of existing conditions

None known
12. Ecological Data

Summary
This product is not considered ecotoxic.

13. Disposal Considerations

Restrictions
There are no product-specific restrictions, however, local council and resource consent conditions may apply, including requirements of trade waste consents.

Disposal method
Disposal of this product must comply with the requirements of the Resource Management Act for which approval should be sought from the Regional Authority. The substance must be treated and therefore rendered non-hazardous before discharge to the environment.

Contaminated packaging
Rinse containers with water before disposal. Preferably re-cycle container, otherwise send to landfill or similar.

14. Transport Information

There are no specific restrictions for this product (not a dangerous good).

UN number: NA  Proper shipping name: NA
Class(es): NA  Packing group: NA
Precautions: Not applicable.  Hazchem code: NA

15. Regulatory Information

Specific Workplace Controls (as per HSNO approval referenced to Controls Matrix)

Key workplace requirements are:
SDS  To be available within 10 minutes in workplaces storing > 50kg.
Labelling  No removal of labels and/or decanting of product into other containers can occur.
Emergency plan  Not required.
Certified handler  Not required.
Tracking  Not required.
Bunding & secondary containment  Not required.
Signage  Not required.
Location test certificate  Not required.
Flammable zone  Not required.
Fire extinguisher  Not required.

Note: The above workplace requirements apply if only this particular substance is present. The complete set of controls for a location will depend on the classification and total quantities of other substances present in that location.

Other Legislation
In New Zealand, the use of this product may come under the Resource Management Act and Regulations, the Health and Safety at Work Act 2015 and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016, local Council Rules and Regional Council Plans.
16. Other Information

Abbreviations

CAS Number: Unique Chemical Abstracts Service Registry Number

Ceiling: Ceiling Exposure Value: The maximum airborne concentration of a biological or chemical agent to which a worker may be exposed at any time.

Controls Matrix: List of default controls linking regulation numbers to Matrix code (e.g. T1, I16).

EC50: Ecotoxic Concentration 50% – concentration in water which is fatal to 50% of a test population (e.g. daphnia, fish species)

EPA: Environmental Protection Authority (New Zealand)

HAZCHEM Code: Emergency action code of numbers and letters that provide information to emergency services, especially fire fighters

HSNO: Hazardous Substances and New Organisms (Act and Regulations)

IARC: International Agency for Research on Cancer

LEL: Lower Explosive Limit

LD50: Lethal Dose 50% – dose which is fatal to 50% of a test population (usually rats).

LC50: Lethal Concentration 50% – concentration in air which is fatal to 50% of a test population (usually rats)

MSDS (SDS): Material Safety Data Sheet (or Safety Data Sheet)

PES: Prescribed Exposure Standard means a WES or a biological exposure standard that is prescribed in a regulation, a safe work instrument or an approval under HSNO (including group standards).

STEL: Short Term Exposure Limit - The maximum airborne concentration of a chemical or biological agent to which a worker may be exposed in any 15 minute period, provided the TWA is not exceeded

TWA: Time Weighted Average – generally referred to WES averaged over typical work day (usually 8 hours)

UEL: Upper Explosive Limit

UN Number: United Nations Number

WES: Workplace Exposure Standard - The airborne concentration of a biological or chemical agent to which a worker may be exposed during work hours (usually 8 hours, 5 days a week). The WES relates to exposure that has been measured by personal monitoring using procedures that gather air samples in the worker’s breathing zone.
