

FIXINE® FOR EQUINE

Frequently asked questions (FAQs)

1. What enhancements does the new Fixine® formulation offer compared to the previous version?

The updated Fixine® maintains its focus on maintaining your horse's body condition and boosting their immune system, just like before. Additionally, this new formulation provides improved support during times of stress, gut, or intestinal issues, ensuring optimal assistance for your horse's health and well-being. For technical information on the ingredients please visit our website [here](#).

2. Will there be any changes in the product's form or its integration into my horse's diet?

No, the product will still be available in its convenient granulated form and can be seamlessly integrated into your horse's diet. It can be blended with other dry feed, maintaining the same feeding rates to ensure your horse's comfort and well-being remain consistent.

3. What ingredients are in the new formula?

The latest evolution of the Fixine® probiotic blend represents an important step forward in supporting equine gut integrity through the inclusion of advanced probiotic strains from Novonesis, specifically *Bacillus subtilis* and *Bacillus licheniformis*. Also in the ingredients is our NZ Zeolite in the form of Optimate™ (ACVM Registration number A011800).

4. What is the shelf life of the new formula?

It is still the same as the previous formula of 12 months from the date of manufacture.

5. When can I expect to receive the replacement or my backordered product?

If you have any previously purchased Fixine® with the older formulation and prefer the new and improved formula, we will happily exchange it for you. Please contact orders@bpmnz.co.nz for replacement orders.

6. How will the new product formulation benefit my horse?

Unlike many traditional probiotics that struggle to survive the acidic conditions of the stomach, *Bacillus* species are **spore-forming bacteria**, meaning they remain stable during feed processing and survive passage through the upper digestive tract. Once they reach the hindgut, the spores germinate and become metabolically active, helping to stabilise the gut microbiome and support digestive efficiency. For horses under training or dietary stress, maintaining this microbial balance is essential. Probiotic supplementation has been shown to improve feed utilisation, reduce digestive disturbances, and support overall health and performance in horses.

7. Will there be any changes in how the product is used or incorporated into my horse's diet?

No, the usage instructions and feeding rates for the new formula remain unchanged, allowing for easy integration with your horse's feed.

8. Can I be assured that the updated product will maintain the same effectiveness for my horse's health?

Yes, the new formulation retains the same performance benefits, ensuring continued support for your horse's well-being and immune system.

Blue Pacific
MINERALS

9. Will there be any price changes or additional costs associated with the updated product?

No, the updated product comes at the same price, and there are no additional costs for the enhanced formula.

10. How can I reach customer support if I have further questions or concerns?

You can contact our customer support team at orders@bpmnz.co.nz or freephone 0800 678 444.
