

PRE-KIDDING MINERAL MIX

OPTIMATE™ GOAT ENERGISE HELPS WITH:

- Providing essential mix of minerals for transition period to kidding including additional requirements to transfer to growing kids.

WHY USE OPTIMATE™ GOAT ENERGISE?

- Because it includes NZ natural zeolite in the form of Optimate™ which is an ACVM Registered toxin binder.
- Its specifically formulated to meet the needs of high producing milking does.
- Created in a dispersible granule for easy distribution in concentrate or forage feed.
- B1 to combat Thiamine deficiencies due to high grain diets.

DIRECTIONS FOR USE:

- Feed 60 grams per goat/per day.
- Recommend to start feeding 6 to 4 weeks before kidding – not to be fed post-kidding.

HEALTH AND SAFETY:

Material safety data sheets are available on request.

WHAT IS OPTIMATE™ GOAT ENERGISE?

- Optimate™ Goat EnergiSe has a special blend of macro minerals, trace minerals, vitamins and probiotics designed and scientifically reviewed to help your does through their transition to kidding.
