SUMMER GRO

**PRO GRO SERIES RTU
FERTIGATION**

SUSTAIN SUMMER GROWTH & FEED QUALITY

SUMMERGRO™ FERTIGATION is a ready-to-use liquid foliar fertiliser formulated to sustain pasture growth and feed quality through hot, dry summer conditions.

Combining nitrogen, sulphur, trace elements, molasses, humic & fulvic acids, plus a wetter for efficient uptake, **SUMMERGRO™ FERTIGATION** keeps pastures performing when heat and moisture stress limit nutrient uptake.

Applied at 20 - 30L per hectare together with 50,000 litres of irrigation water, **SUMMERGRO™ FERTIGATION** delivers rapid foliar nutrition directly to the leaf - bypassing dry soil conditions to maintain growth, palatability, and nutrient density.

Use it through summer to protect production, sustain energy levels, and support resilience across dairy, sheep & beef, and mixed farming systems.

**PROVEN
SCIENCE
REAL
RESULTS**

KEY FEATURES:

- Sustains pasture growth and feed quality during hot, dry periods
- Supplies balanced macro & micro nutrients plus bio-stimulants
- Enhances stress tolerance and root activity
- Reduces nutrient loss - efficient foliar uptake, minimal leaching
- RTU formulation - simple, accurate, and consistent results

STAY GREEN THROUGH THE HEAT

TARGET CUSTOMERS:

- Dairy farmers protecting summer pasture performance
- Sheep & beef operators maintaining feed value in dry months
- Contractors applying foliar programs for summer growth
- Mixed enterprises managing summer grazing systems

KEY BENEFITS

- **Maintains Growth in Heat:** Supplies nutrients to sustain production through high temperatures and moisture stress
- **Supports Feed Quality:** Preserves protein, sugar & mineral content
- **Improves Plant Resilience:** Bio-stimulants enhance tolerance and recovery
- **Reduces Nutrient Loss:** Efficient foliar delivery minimises waste
- **Ready & Easy to Apply:** No mixing, no fuss

SUPPORTING SCIENCE - WHY LIQUIDS WORK POST-CUT

- **Bypasses Soil Limitations:** Foliar nutrients remain available when dry soils restrict uptake
- **Rapid Response:** Immediate absorption through leaves for visible results
- **Enhanced Resilience:** Humic & fulvic acids support root health under stress
- **Efficient Use:** Lower nutrient volumes achieve the same outcome as solids
- **Improved Feed Value:** Maintains palatability and mineral density

NO COMPLEX BLENDING
NO WASTED NUTRIENTS

INGREDIENTS:

Urea Ammonium Nitrate, Phosphorus, Potassium, Sulphur, Boron, Calcium, Cobalt, Copper, Iron, Magnesium, Molybdenum, Zinc, Manganese, Selenium, Iodine, Nickel, Humic and Fulvic Acids, Kelp Extracts, Molasses, Wetter/Spreader

DIRECTIONS FOR USE

Usage:

Rate of 20 - 30L per hectare together with 50,000 litres of irrigation water

Best used:

- During dry or heat-stressed periods
- To maintain summer feed quality
- For dairy, sheep & beef, and mixed pasture systems

Compatibility:

- Suitable with most spray programs
- Can be used with other foliar or fertigation applications

PACK SIZE:

200L | 1000L
